PROFILE

When I was 14, I didn't know anything about programming, servers, projects, design even team work communication, absolutely nothing.
But in my spare time, I liked to make changes to forums like the colours of the banners, the overall templates or even improve the
quality of games by adding more sound effects or character models.

One year later, my friend and I started making servers for Counter-Strike, Minecraft, Websites/Forums and TeamSpeak (VOIP).
We got a point where we had multiple machines running multiple game servers, databases. For example, there were at least 150 people actively playing one of our servers at all time.
Learning how to improve the user experience of our servers for the community just naturally became a hobby. This included trying to solve problems user-end problems and designing better interfaces.

EXPERIENCE (YEARS AND LEVEL)

4	4	3	2	2
HTML5	CSS3/SASS	JAVASCRIPT	VUE.JS	UX/UI
